Creatine MagnaPower®

- » Increased energy & power
- » Faster recovery from exercise
- » Greater Creatine stability
- » Greater increase in intracellular water, an indicator of greater protein synthesis

Creatine MagnaPower® is scientifically proven to increase the ability of the body to synthesize and regenerate the ATP required for supplying the energy needed for muscle effort.

- Facilitates vital oxygen delivery to working muscle tissue
- Clinical studies showed Creatine MagnaPower most strongly regenerates energy needed for anaerobic performance

Albion's patented technology protects the creatine molecule from transcending into inert creatinine, thus increasing the amount of the physiologically active creatine which is truly available for muscle cell metabolism—resulting in much higher muscle energy.

Excellent For Use In:

- Electrolyte powders or beverages
- Muscle building supplements
- Protein powder supplements
- Sports recovery drinks

Mineral Chelates

Creatine MagnaPower® (Magnesium Creatine Chelate)

Branded Ingredient
for use on labels

ISO 9001:2008
